INDEX TO AUTHORS

A

Abendschein, Patricia A. See *Meister, Levintow, Greenfield, and Abendschein*, 441

Abrams, Adolph. See *Borsook, Abrams, and Lowy*, 111

Abramsky, Tessa. See *Shemin, Russell, and Abramsky*, 613

Aisenberg, A. C., and **Potter, Van R.** Effect of fluoride and dinitrophenol on acetate activation in kidney and liver homogenates, 737

Ashmore, James, Renold, Albert E., Nesbett, Frances B., and **Hastings, A. Baird.** Studies on carbohydrate metabolism in rat liver slices. V. Glycerol metabolism in relation to other substrates in normal and diabetic tissue, 153

B

Baxter, Robert F. See *Mounter, Baxter, and Chanutin*, 699

Beatty, Clarissa H., and **West, Edward S.** Effect of succinic and malic acids and fructose on ketosis in alloxan-diabetic rats, 661

Bernstein, I. A., Lentz, Kenneth, Malm, Mignon, Schambye, Per, and **Wood, Harland G.** Degradation of glucose-C^{14} with *Leuconostoc mesenteroides;* alternate pathways and tracer patterns, 137

Bishop, Jillian. See *Buston and Bishop*, 217

Bloom, Ben. Fraction of glucose catabolized via the Embden-Meyerhof pathway: alloxan-diabetic and fasted rats, 467

—, **Eisenberg, Frank, Jr.,** and **Stetten, DeWitt, Jr.** Glucose catabolism in liver slices via the phosphogluconate oxidation pathway, 461

Borgström, Bengt, Sudduth, Herschel C., and **Lehninger, Albert L.** Phosphorylation coupled to reduction of cytochrome *c* by β-hydroxybutyrate, 571

Borsook, Henry, Abrams, Adolph, and **Lowy, Peter H.** Fructose-amino acids in liver: stimuli of amino acid incorporation *in vitro*, 111

Bott, P. A. The concentration of potassium in glomerular urine of *Necturi*, 287

Boyer, P. D. See *Harrison, Boyer, and Falcone*, 303

Braun, Armin C. See *Woolley, Schaffner, and Braun*, 485

Brown, Douglas M. See *Smith, Kimmel, Brown, and Thompson*, 67

Bueding, Ernest, and **MacKinnon, Joan A.** Hexokinases of *Schistosoma mansoni*, 495

— and —. Studies of the phosphoglucose isomerase of *Schistosoma mansoni*, 507

Buston, H. W., and **Bishop, Jillian.** Synthetic α-amino-β-hydroxycaproic acids, 217

C

Campbell, Mildred. See *Hess, Campbell, and Herranen*, 163

Chaikoff, I. L. See *Tong and Chaikoff*, 473

Chanutin, Alfred. See *Mounter, Baxter, and Chanutin*, 699

—. See *Mounter, Dien, and Chanutin*, 691

Chargaff, Erwin. See *Spitnik, Lipshitz, and Chargaff*, 765

Cheldelin, Vernon H. See *Stewart, Cheldelin, and King*, 319

Clark, Carroll T. See *Udenfriend, Weissbach, and Clark*, 337

Cook, Margaret. See *Lorber and Cook*, 823

Coon, Minor J. See *Rose, Coon, Lockhart, and Lambert*, 101

Cotzias, George C. See *Serlin and Cotzias*, 263

XUM

Crampton, Charles F., Moore, Stanford, and **Stein, William H.** Chromatographic fractionation of calf thymus histone, 787

D

D'Angeli, F. See *Henderson, Koski, and D'Angeli,* 369

Dannenberg, Arthur M., Jr., and **Smith, Emil L.** Action of proteinase I of bovine lung. Hydrolysis of the oxidized B chain of insulin; polymer formation from amino acid esters, 55

— and —. Proteolytic enzymes of lung, 45

Deiss, William P., and **Leon, Arthur S.** Mucopolysaccharides of heart valve mucoprotein, 685

Dien, Lien Tien H. See *Mounter, Dien, and Chanutin,* 691

Dorfman, Ralph I. See *Forchielli, Rosenkrantz, and Dorfman,* 713

E

Eisenberg, Frank, Jr. See *Bloom, Eisenberg, and Stetten,* 461

Eisenstein, Albert B. Metabolism of cortisone by rat liver homogenate, 585

F

Falcone, A. B. See *Harrison, Boyer, and Falcone,* 303

Fellig, Josef. See *Thannhauser, Fellig, and Schmidt,* 211

Finch, Clement A. See *Gabrio, Hennessey, Thomasson, and Finch,* 357

Fishman, William H., and **Green, Sidney.** Microanalysis of glucuronide glucuronic acid as applied to β-glucuronidase and glucuronic acid studies, 527

Forchielli, Enrico, Rosenkrantz, Harris, and **Dorfman, Ralph I.** Metabolism of 11-deoxycortisol *in vitro,* 713

Fresco, Jacques R., and **Warner, Robert C.** Application of the isotope derivative method to the analysis of pyrimidines, 751

Fritzson, Per. See *Pihl and Fritzson,* 345

Futterman, Sidney, and **Roe, Joseph H.** The identification of ribulose and L-xylulose in human and rat urine, 257

G

Gabrio, Beverly Wescott, Hennessey, Marion, Thomasson, Joan, and **Finch, Clement A.** Erythrocyte preservation. IV. *In vitro* reversibility of the storage lesion, 357

Gray, Irving. See *Jordan and Gray,* 669

Green, Sidney. See *Fishman and Green,* 527

Greenberg, David M. See *Matsuo and Greenberg,* 547

Greenfield, Robert E. See *Meister, Levintow, Greenfield, and Abendschein,* 441

Guarino, Armand J., and **Sable, Henry Z.** Studies on phosphomutases. II. Phosphoribomutase and phosphoglucomutase, 515

H

Harrison, W. H., Boyer, P. D., and **Falcone, A. B.** The mechanism of enzymic phosphate transfer reactions, 303

Hastings, A. Baird. See *Ashmore, Renold, Nesbett, and Hastings,* 153

Hayaishi, Osamu. Enzymatic decarboxylation of malonic acid, 125

Henderson, L. M., Koski, Ruth E., and **D'Angeli, F.** The rôle of riboflavin and vitamin B_6 in tryptophan metabolism, 369

Hennessey, Marion. See *Gabrio, Hennessey, Thomasson, and Finch,* 357

Herranen, Ailene. See *Hess, Campbell, and Herranen,* 163

Hess, E. L., Campbell, Mildred, and **Herranen, Ailene.** A protease present in extracts of a lymphatic organ, 163

Huffman, Max N., and **Lott, Mary Harriet.** 16-Substituted steroids. XII. Estradiol-3,16α, 627
— and —. XIII. Androstan-3β,16β-diol and androstan-3β,16α-diol, 633
Hutcheson, Ruth M. See *Touster, Hutcheson, and Rice,* 677

J

Johnson, B. Connor. See *Sime and Johnson,* 41
Jordan, William J., and **Gray, Irving.** The biochemical response to trauma. I. Nucleotide changes in tourniquet shock, 669

K

Kaplan, Nathan O. See *Shuster and Kaplan,* 183
—. See *Shuster, Kaplan, and Stolzenbach,* 195
Kimmel, J. R. See *Smith, Kimmel, Brown, and Thompson,* 67
King, Tsoo E. See *Stewart, Cheldelin, and King,* 319
Korn, Edward D. Clearing factor, a heparin-activated lipoprotein lipase. I. Isolation and characterization of the enzyme from normal rat heart, 1
—. II. Substrate specificity and activation of coconut oil, 15
Kornberg, Arthur, Lieberman, Irving, and **Simms, Ernest S.** Enzymatic synthesis and properties of 5-phosphoribosylpyrophosphate, 389
—, —, and —. Enzymatic synthesis of purine nucleotides, 417
—. See *Lieberman, Kornberg, and Simms,* 403, 429
Koski, Ruth E. See *Henderson, Koski, and D'Angeli,* 369
Kratzer, F. Howard. See *Rachele, Kuchinskas, Kratzer, and du Vigneaud,* 593
Kuchinskas, Edward J. See *Rachele, Kuchinskas, Kratzer, and du Vigneaud,* 593

L

Lack, Leon. See *Wriston, Lack, and Shemin,* 603
Lambert, G. Frederick. See *Rose, Coon, Lockhart, and Lambert,* 101
Lardy, Henry A. See *Maley and Lardy,* 377
Larner, Joseph, and **McNickle, C. M.** Gastrointestinal digestion of starch. I. The action of oligo-1,6-glucosidase on branched saccharides, 723
Laskowski, M. See *Privat de Garilhe and Laskowski,* 269
Lehninger, Albert L. See *Borgstrōm, Sudduth, and Lehninger,* 571
—. See *Nielsen and Lehninger,* 555
Lentz, Kenneth, and **Wood, Harland G.** Synthesis of acetate from formate and carbon dioxide by *Clostridium thermoaceticum,* 645
—. See *Bernstein, Lentz, Malm, Schambye, and Wood,* 137
Leon, Arthur S. See *Deiss and Leon,* 685
Levintow, Leon. See *Meister, Levintow, Greenfield, and Abendschein,* 441
Li, Choh Hao. See *Raacke and Li,* 277
Lieberman, Irving, Kornberg, Arthur, and **Simms, Ernest S.** Enzymatic synthesis of nucleoside diphosphates and triphosphates, 429
—, —, and —. Enzymatic synthesis of pyrimidine nucleotides. Orotidine-5′-phosphate and uridine-5′-phosphate, 403
—. See *Kornberg, Lieberman, and Simms,* 389, 417
Liener, Irvin E. See *Viswanatha and Liener,* 777
Lindsley, John. See *Troll and Lindsley,* 655
Lipshitz, Rakoma. See *Spitnik, Lipshitz, and Chargaff,* 765
Lockhart, Haines B. See *Rose, Coon, Lockhart, and Lambert,* 101
Lorber, Victor, and **Cook, Margaret.** The metabolism of *n*-butyrate-C^{14} by mammalian heart muscle, 823

XUM

Lott, Mary Harriet. See *Huffman and Lott*, 627, 633
Lowy, Peter H. See *Borsook, Abrams, and Lowy*, 111

M

MacKinnon, Joan A. See *Bueding and MacKinnon*, 495, 507
Maley, Gladys Feldott, and **Lardy, Henry A.** Efficiency of phosphorylation in selected oxidations by mitochondria from normal and thyrotoxic rat livers, 377
Malm, Mignon. See *Bernstein, Lentz, Malm, Schambye, and Wood*, 137
Matsuo, Yoshihiko, and **Greenberg, David M.** Metabolic formation of homoserine and α-aminobutyric acid from methionine, 547
McNickle, C. M. See *Larner and McNickle*, 723
Meister, Alton, Levintow, Leon, Greenfield, Robert E., and **Abendschein, Patricia A.** Hydrolysis and transfer reactions catalyzed by ω-amidase preparations, 441
Moore, Stanford. See *Crampton, Moore, and Stein*, 787
Morgan, Joseph F., and **Morton, Helen J.** Studies on the sulfur metabolism of tissues cultivated *in vitro*. I. A critical requirement of L-cystine, 539
Morita, Toshiko N. See *Nakada, Morita, and Wick*, 803
Morton, Helen J. See *Morgan and Morton*, 539
Mounter, L. A. The complex nature of dialkylfluorophosphatases of hog and rat liver and kidney, 705
—, **Baxter, Robert F.,** and **Chanutin, Alfred.** Dialkylfluorophosphatases of microorganisms, 699
—, **Dien, Lien Tien H.,** and **Chanutin, Alfred.** The distribution of dialkylfluorophosphatases in the tissues of various species, 691

N

Nakada, Henry I., Morita, Toshiko N., and **Wick, Arne N.** Studies on the relationships between insulin, glucosamine, and glucose in rat diaphragms, 803
Nakayama, Teishi. See *Okuhara and Nakayama*, 295
Nesbett, Frances B. See *Ashmore, Renold, Nesbett, and Hastings*, 153
Nielsen, Sigurd Olaf, and **Lehninger, Albert L.** Phosphorylation coupled to the oxidation of ferrocytochrome *c*, 555
Nyc, Joseph F., and **Zabin, Irving.** The formation of serine from pyruvate, 35

O

O'Kane, D. J. See *Wolfe and O'Kane*, 637
Okuhara, Eiji, and **Nakayama, Teishi.** Studies on the conjugated lipides. VI. On the structure of inositol phospholipide, 295

P

Perlman, D. Spectrophotometric method for the determination of 5-keto-D-gluconic acid, 353
Pihl, Alexander, and **Fritzson, Per.** The catabolism of C^{14}-labeled β-alanine in the intact rat, 345
Potter, Van R. See *Aisenberg and Potter*, 737
—. See *Siekevitz and Potter*, 221, 237
Privat de Garilhe, M., and **Laskowski, M.** Study of the enzymatic degradation of deoxyribonucleic acid by two different deoxyribonucleodepolymerases, 269
Prusoff, William H. Studies on the mechanism of action of 6-azathymine. I. Biosynthesis of the deoxyriboside, 809

R

Raacke, I. D., and **Li, Choh Hao.** Corticotropins (ACTH). VI. Isoelectric point of α-corticotropin as determined by zone electrophoresis on starch, 277
Rachele, Julian R., Kuchinskas, Edward J., Kratzer, F. Howard, and **du**

Vigneaud, Vincent. Hydrogen isotope effect in the oxidation *in vivo* of methionine labeled in the methyl group, 593
Renold, Albert E. See *Ashmore, Renold, Nesbett, and Hastings,* 153
Rice, Louise. See *Touster, Hutcheson, and Rice,* 677
Roe, Joseph H. See *Futterman and Roe,* 257
Rose, William C., Coon, Minor J., Lockhart, Haines B., and **Lambert, G. Frederick.** The amino acid requirements of man. XI. The threonine and methionine requirements, 101
Rosenkrantz, Harris. See *Forchielli, Rosenkrantz, and Dorfman,* 713
Russell, Charlotte S. See *Shemin, Russell, and Abramsky,* 613

S

Sable, Henry Z. See *Guarino and Sable,* 515
Schaffner, G. See *Woolley, Schaffner, and Braun,* 485
Schambye, Per. See *Bernstein, Lentz, Malm, Schambye, and Wood,* 137
Schmidt, Gerhard. See *Thannhauser, Fellig, and Schmidt,* 211
Serlin, Irving, and **Cotzias, George C.** Microdiffusion of acetic acid as an assay for acetylcholinesterase, 263
Shemin, David, Russell, Charlotte S., and **Abramsky, Tessa.** The succinate-glycine cycle. I. The mechanism of pyrrole synthesis, 613
—. See *Wriston, Lack, and Shemin,* 603
Shuster, Louis, and **Kaplan, Nathan O.** The preparation and properties of 3′-triphosphopyridine nucleotide, 183
—, —, and **Stolzenbach, Francis E.** The reaction of pyridine nucleotides with trifluoroacetic acid anhydride, 195
Siekevitz, Philip, and **Potter, Van R.** Biochemical structure of mitochondria. I. Intramitochondrial components and oxidative phosphorylation, 221
Siekevitz, Phillip, and **Potter, Van R.** II. Radioactive labeling of intramitochondrial nucleotides during oxidative phosphorylation, 237
Sime, John T., and **Johnson, B. Connor.** Metabolism of methionine-$C^{14}H_3$ in the chick. II. Distribution of C^{14} in the urinary uric acid molecule, 41
Simms, Ernest S. See *Kornberg, Lieberman, and Simms,* 389, 417
—. See *Lieberman, Kornberg, and Simms,* 403, 429
Sinsheimer, Robert L. The action of pancreatic deoxyribonuclease. II. Isomeric dinucleotides, 579
Smith, Emil L., Kimmel, J. R., Brown, Douglas M., and **Thompson, E. O. P.** Isolation and properties of a crystalline mercury derivative of a lysozyme from papaya latex, 67
—. See *Dannenberg and Smith,* 45, 55
Smith, Lucile. Reactions of cytochromes *a* and a_3. I. Studies of oxidation and reduction of the pigments in a purified preparation, 833
—. II. Studies with *Micrococcus pyogenes* var. *albus* and *Bacillus subtilis,* 847
Spitnik, Pnina, Lipshitz, Rakoma, and **Chargaff, Erwin.** Studies on nucleoproteins. III. Deoxyribonucleic acid complexes with basic polyelectrolytes and their fractional extraction, 765
Stein, William H. See *Crampton, Moore, and Stein,* 787
Stetten, DeWitt, Jr. See *Bloom, Eisenberg, and Stetten,* 461
Stewart, Charles J., Cheldelin, Vernon H., and **King, Tsoo E.** Synthesis and biological activities of pantetheine analogues. XVI. Pantothenic acid studies, 319
Stolzenbach, Francis E. See *Shuster, Kaplan, and Stolzenbach,* 195
Sudduth, Herschel C. See *Borgström, Sudduth, and Lehninger,* 571

T

Thannhauser, S. J., Fellig, Josef, and **Schmidt, Gerhard.** The structure of

XUM

cerebroside sulfuric ester of beef brain, 211

Thomasson, Joan. See *Gabrio, Hennessey, Thomasson, and Finch*, 357

Thompson, E. O. P. See *Smith, Kimmel, Brown, and Thompson*, 67

Tolbert, N. E. Formic acid metabolism in barley leaves, 27

Tong, W., and **Chaikoff, I. L.** Metabolism of I^{131} by the marine alga, *Nereocystis luetkeana*, 473

Touster, Oscar, Hutcheson, Ruth M., and **Rice, Louise.** The influence of D-glucuronolactone on the excretion of L-xylulose by humans and guinea pigs, 677

Troll, Walter, and **Lindsley, John.** A photometric method for the determination of proline, 655

U

Udenfriend, Sidney, Weissbach, Herbert, and **Clark, Carroll T.** The estimation of 5-hydroxytryptamine (serotonin) in biological tissues, 337

V

Varner, J. E. See *Webster and Varner*, 91

du Vigneaud, Vincent. See *Rachele, Kuchinskas, Kratzer, and du Vigneaud*, 593

Villee, Claude A. An estradiol-induced stimulation of citrate utilization by placenta, 171

Viswanatha, T., and **Liener, Irvin E.** The inhibition of trypsin. III. Influence of urea, 777

W

Warner, Robert C. See *Fresco and Warner*, 751

Webster, George C., and **Varner, J. E.** Aspartate metabolism and asparagine synthesis in plant systems, 91

Weissbach, Herbert. See *Udenfriend, Weissbach, and Clark*, 337

West, Edward S. See *Beatty and West*, 661

Wick, Arne N. See *Nakada, Morita, and Wick*, 803

Wolfe, R. S., and **O'Kane, D. J.** Cofactors of the carbon dioxide exchange reaction of *Clostridium butyricum*, 637

Wood, Harland G. See *Bernstein, Lentz, Malm, Schambye, and Wood*, 137

—. See *Lentz and Wood*, 645

Woolley, D. W., Schaffner, G., and **Braun, Armin C.** Studies on the structure of the phytopathogenic toxin of *Pseudomonas tabaci*, 485

Wriston, John C., Jr., Lack, Leon, and **Shemin, David.** The mechanism of porphyrin formation. Further evidence on the relationship of the citric acid cycle and porphyrin formation, 603

Z

Zabin, Irving. See *Nyc and Zabin*, 35

INDEX TO SUBJECTS

A

Acetate: Activation, kidney and liver, fluoride and dinitrophenol effect, *Aisenberg and Potter*, 737
Synthesis, carbon dioxide relation, *Clostridium thermoaceticum, Lentz and Wood*, 645
—, formate relation, *Clostridium thermoaceticum, Lentz and Wood*, 645
Acetic acid: Acetylcholinesterase determination, relation, *Serlin and Cotzias*, 263
Trifluoro-. *See* Trifluoroacetic acid
Acetylcholinesterase: Determination, acetic acid relation, *Serlin and Cotzias*, 263
Alanine: β-, carbon 14-labeled, catabolism, *Pihl and Fritzson*, 345
Alga: Marine. *See also Nereocystis luetkeana*
Alloxan: Diabetes, glucose catabolism, Embden-Meyerhof pathway, *Bloom*, 467
—, ketosis, fructose effect, *Beatty and West*, 661
—, —, malic acid effect, *Beatty and West*, 661
—, —, succinic acid effect, *Beatty and West*, 661
Amidase: ω-, reactions, *Meister, Levintow, Greenfield, and Abendschein*, 441
Amino acid(s): Esters, polymers from, lung proteinase I, relation, *Dannenberg and Smith*, 55
Fructose-, liver, amino acid effect, *Borsook, Abrams, and Lowy*, 111
Requirements, *Rose, Coon, Lockhart, and Lambert*, 101
Aminobutyric acid: α-, formation *in vivo*, methionine relation, *Matsuo and Greenberg*, 547
Amino-β-hydroxycaproic acid(s): α-, synthetic, *Buston and Bishop*, 217
Androstan-3β,16α-diol: *Huffman and Lott*, 633
Androstan-3β,16β-diol: *Huffman and Lott*, 633
Asparagine: Synthesis, plant systems, *Webster and Varner*, 91
Aspartate: Metabolism, plant systems, *Webster and Varner*, 91
Azathymine: 6-, action, mechanism, *Prusoff*, 809
Azathymine deoxyriboside: 6-, biosynthesis, *Prusoff*, 809

B

Bacillus subtilis: Cytochromes *a* and a_3, *Smith*, 847
Bacteria: *See also Clostridium, Leuconostoc, Micrococcus, Pseudomonas*
Barley: Leaves, formic acid metabolism, *Tolbert*, 27
Blood cell: Red, preservation, *Gabrio, Hennessey, Thomasson, and Finch*, 357
Brain: Cerebroside sulfuric ester, chemical constitution, *Thannhauser, Fellig, and Schmidt*, 211
Butyrate: *n*-, carbon 14-labeled, metabolism, heart, *Lorber and Cook*, 823
Butyric acid: α-Amino-. *See* Aminobutyric acid

C

Caproic acid(s): α-Amino-β-hydroxy-. *See* Amino-β-hydroxycaproic acid
Carbohydrate: Metabolism, liver, *Ashmore, Renold, Nesbett, and Hastings*, 153
Carbon dioxide: Acetate synthesis from, *Clostridium thermoaceticum, Lentz and Wood*, 645
Exchange reaction, *Clostridium butyricum, Wolfe and O'Kane*, 637
Cerebroside sulfuric ester: Brain, chemical constitution, *Thannhauser, Fellig, and Schmidt*, 211
Citrate: Utilization, placenta, estradiol effect, *Villee*, 171

Citric acid: Cycle, porphyrin formation, relation, *Wriston, Lack, and Shemin*, 603
Clearing factor: *Korn*, 1, 15
Clostridium butyricum: Carbon dioxide exchange reaction, *Wolfe and O'Kane*, 637
Clostridium thermoaceticum: Acetate synthesis from formate and carbon dioxide, *Lentz and Wood*, 645
Coconut oil: Lipoprotein lipase, heparin-activated, *Korn*, 15
Corticotropin(s): *Raacke and Li*, 277
α-, isoelectric point, *Raacke and Li*, 277
Cortisol: Deoxy-. *See* Deoxycortisol
Cortisone: Metabolism, liver, *Eisenstein*, 585
Cystine: L-, requirement, tissue cultures, *Morgan and Morton*, 539
Cytochrome(s): *a*, *Bacillus subtilis*, *Smith*, 847
—, *Micrococcus pyogenes*, *Smith*, 847
—, reactions, *Smith*, 833, 847
a_3, *Bacillus subtilis*, *Smith*, 847
—, *Micrococcus pyogenes*, *Smith*, 847
—, reactions, *Smith*, 833, 847
c, reduction, phosphorylation and β-hydroxybutyrate relation, *Borgström, Sudduth, and Lehninger*, 571
Ferro-. *See* Ferrocytochrome

D

Deoxycortisol: 11-, metabolism, *in vitro*, *Forchielli, Rosenkrantz, and Dorfman*, 713
Deoxyribonuclease: Pancreas, *Sinsheimer*, 579
Deoxyribonucleic acid: Complexes, *Spitnik, Lipshitz, and Chargaff*, 765
Degradation, enzymatic, deoxyribonucleodepolymerase relation, *Privat de Garilhe and Laskowski*, 269
Deoxyribonucleodepolymerase(s): Deoxyribonucleic acid degradation, enzymatic, relation, *Privat de Garilhe and Laskowski*, 269
Diabetes: Alloxan, glucose catabolism, Embden-Meyerhof pathway, *Bloom*, 467
—, ketosis, fructose effect, *Beatty and West*, 661
—, —, malic acid effect, *Beatty and West*, 661
—, —, succinic acid effect, *Beatty and West*, 661
Glycerol metabolism, liver, *Ashmore, Renold, Nesbett, and Hastings*, 153
Dialkylfluorophosphatase(s): Kidney, *Mounter*, 705
Liver, *Mounter*, 705
Microorganisms, *Mounter, Baxter, and Chanutin*, 699
Tissues, *Mounter, Dien, and Chanutin*, 691
Diaphragm: Insulin, glucosamine, and glucose relationship, *Nakada, Morita, and Wick*, 803
Dinitrophenol: Acetate activation, kidney and liver, effect, *Aisenberg and Potter*, 737
Dinucleotide(s): Isomeric, pancreatic deoxyribonuclease action, *Sinsheimer*, 579

E

Embden-Meyerhof: Pathway, glucose catabolism, alloxan diabetes and fasting, *Bloom*, 467
Enzyme(s): Deoxyribonucleic acid degradation, deoxyribonucleodepolymerase relation, *Privat de Garilhe and Laskowski*, 269
Malonic acid decarboxylation, *Hayaishi*, 125
Nucleoside diphosphate synthesis, *Lieberman, Kornberg, and Simms*, 429
— triphosphate synthesis, *Lieberman, Kornberg, and Simms*, 429
Orotidine-5′-phosphate synthesis, *Lieberman, Kornberg, and Simms*, 403
Phosphate transfer, mechanism, *Harrison, Boyer, and Falcone*, 303
5-Phosphoribosylpyrophosphate synthesis, *Kornberg, Lieberman, and Simms*, 389

Enzyme(s)—*continued:*
Proteolysis, lung, *Dannenberg and Smith*, 45
Purine nucleotide synthesis, *Kornberg, Lieberman, and Simms*, 417
Pyrimidine nucleotide synthesis, *Lieberman, Kornberg, and Simms*, 403
Uridine-5′-phosphate synthesis, *Lieberman, Kornberg, and Simms*, 403
See also Acetylcholinesterase, Amidase, etc.
Erythrocyte: *See* Blood cell, red
Esterase: Acetylcholin-. *See* Acetylcholinesterase
Estradiol: -3,16α. *Huffman and Lott*, 627
Placenta citrate utilization, effect, *Villee*, 171

F

Fasting: Glucose catabolism, Embden-Meyerhof pathway, *Bloom*, 467
Ferrocytochrome: *c*, oxidation, phosphorylation relation, *Nielsen and Lehninger*, 555
Fluoride: Acetate activation, kidney and liver, effect, *Aisenberg and Potter*, 737
Formate: Acetate synthesis from, *Clostridium thermoaceticum, Lentz and Wood*, 645
Formic acid: Metabolism, leaves, barley, *Tolbert*, 27
Fructose: -Amino acids, liver, amino acid effect, *Borsook, Abrams, and Lowy*, 111
Ketosis, alloxan diabetes, effect, *Beatty and West*, 661

G

Gastrointestinal tract: Digestion, saccharides, branched, oligo-1,6-glucosidase effect, *Larner and McNickle*, 723
—, starch, *Larner and McNickle*, 723
Glomerulus: Urine, potassium, *Necturus, Bott*, 287
Gluconic acid: 5-Keto-D-. *See* Keto-D-gluconic acid
Glucosamine: Diaphragm, effect, *Nakada, Morita, and Wick*, 803
Glucose: Carbon 14-labeled, degradation, *Leuconostoc mesenteroides, Bernstein, Lentz, Malm, Schambye, and Wood*, 137
Catabolism, Embden-Meyerhof pathway, alloxan diabetes and fasting, *Bloom*, 467
—, liver, phosphogluconate oxidation pathway relation, *Bloom, Eisenberg, and Stetten*, 461
Diaphragm, effect, *Nakada, Morita, and Wick*, 803
Glucosidase: Oligo-1,6-. *See* Oligo-1,6-glucosidase
Glucuronic acid: Glucuronide-. *See* Glucuronide glucuronic acid
Metabolism, glucuronide glucuronic acid determination, relation, *Fishman and Green*, 527
Glucuronidase: β-, action, glucuronide glucuronic acid determination, relation, *Fishman and Green*, 527
Glucuronide glucuronic acid: Determination, β-glucuronidase action, relation, *Fishman and Green*, 527
—, glucuronic acid studies, relation, *Fishman and Green*, 527
Glucuronolactone: D-, L-xylulose excretion, effect, *Touster, Hutcheson, and Rice*, 677
Glycerol: Metabolism, liver, diabetes, *Ashmore, Renold, Nesbett, and Hastings*, 153
Glycine: -Succinate cycle, pyrrole synthesis, relation, *Shemin, Russell, and Abramsky*, 613

H

Heart: *n*-Butyrate-C^{14} metabolism, *Lorber and Cook*, 823
Lipoprotein lipase, heparin-activated, *Korn*, 1
Valve mucoprotein mucopolysaccharides, *Deiss and Leon*, 685
Heparin: -Activated lipoprotein lipase, coconut oil, *Korn*, 15
— — —, heart, *Korn*, 1
Hexokinase(s): *Schistosoma mansoni, Bueding and MacKinnon*, 495

Histone: Thymus, fractionation, chromatographic, *Crampton, Moore, and Stein*, 787
Homoserine: Formation *in vivo*, methionine relation, *Matsuo and Greenberg*, 547
Hydrogen: Isotope, methionine, methyl group-labeled, oxidation, *in vivo*, effect, *Rachele, Kuchinskas, Kratzer, and du Vigneaud*, 593
Hydroxybutyrate: β-, cytochrome *c* reduction, relation, *Borgström, Sudduth, and Lehninger*, 571
Hydroxytryptamine: 5-, determination, *Udenfriend, Weissbach, and Clark*, 337

I

Inositol phospholipide: Chemical constitution, *Okuhara and Nakayama*, 295
Insulin: Diaphragm, effect, *Nakada, Morita, and Wick*, 803
Hydrolysis, lung proteinase I, relation, *Dannenberg and Smith*, 55
Iodine: Isotopic, metabolism, *Nereocystis luetkeana, Tong and Chaikoff*, 473
Isomerase: Phosphoglucose. *See* Phosphoglucose isomerase

K

Keto-D-gluconic acid: 5-, determination, spectrophotometric, *Perlman*, 353
Ketosis: Diabetes, alloxan, fructose effect, *Beatty and West*, 661
—, —, malic acid effect, *Beatty and West*, 661
—, —, succinic acid effect, *Beatty and West*, 661
Kidney: Acetate activation, fluoride and dinitrophenol effect, *Aisenberg and Potter*, 737
Dialkylfluorophosphatase, *Mounter*, 705

L

Latex: Papaya, lysozyme, crystalline mercury derivative, isolation and properties, *Smith, Kimmel, Brown, and Thompson*, 67
Leuconostoc mesenteroides: Glucose-C^{14} degradation, *Bernstein, Lentz, Malm, Schambye, and Wood*, 137
Lipase: Lipoprotein, heparin-activated, coconut oil, *Korn*, 15
—, —, heart, *Korn*, 1
Lipide(s): Conjugated, *Okuhara and Nakayama*, 295
Lipoprotein: Lipase, heparin-activated, coconut oil, *Korn*, 15
—, —, heart, *Korn*, 1
Liver: Acetate activation, fluoride and dinitrophenol effect, *Aisenberg and Potter*, 737
Carbohydrate metabolism, *Ashmore, Renold, Nesbett, and Hastings*, 153
Cortisone metabolism, *Eisenstein*, 585
Dialkylfluorophosphatase, *Mounter*, 705
Fructose-amino acids, amino acid effect, *Borsook, Abrams, and Lowy*, 111
Glucose catabolism, phosphogluconate oxidation pathway relation, *Bloom, Eisenberg, and Stetten*, 461
Glycerol metabolism, diabetes, *Ashmore, Renold, Nesbett, and Hastings*, 153
Mitochondria, oxidation, thyrotoxicosis, phosphorylation relation, *Maley and Lardy*, 377
Lung: Enzymes, proteolytic, *Dannenberg and Smith*, 45
Proteinase I, insulin hydrolysis, relation, *Dannenberg and Smith*, 55
— —, polymers from amino acid esters, relation, *Dannenberg and Smith*, 55
Lymph: Organ, protease, *Hess, Campbell, and Herranen*, 163
Lysozyme: Crystalline mercury derivative, isolation and properties, papaya latex, *Smith, Kimmel, Brown, and Thompson*, 67

M

Malic acid: Ketosis, alloxan diabetes, effect, *Beatty and West*, 661

Malonic acid: Decarboxylation, enzymatic, *Hayaishi*, 125
Methionine: α-Aminobutyric acid formation from, *in vivo*, *Matsuo and Greenberg*, 547
Carbon 14-labeled, metabolism, urine uric acid, relation, *Sime and Johnson*, 41
Homoserine formation from, *in vivo*, *Matsuo and Greenberg*, 547
Methyl group-labeled, oxidation, *in vivo*, hydrogen isotope effect, *Rachele, Kuchinskas, Kratzer, and du Vigneaud*, 593
Requirement, *Rose, Coon, Lockhart, and Lambert*, 101
Micrococcus pyogenes: Cytochromes *a* and a_3, *Smith*, 847
Microorganism(s): Dialkylfluorophosphatase, *Mounter, Baxter, and Chanutin*, 699
See also Bacillus, Bacteria
Mitochondrion: Liver, oxidation, thyrotoxicosis, phosphorylation relation, *Maley and Lardy*, 377
Nucleotides, radioactive labeling, phosphorylation, oxidative, relation, *Siekevitz and Potter*, 237
Phosphorylation, oxidative, relation, *Siekevitz and Potter*, 221
Structure, biochemical, *Siekevitz and Potter*, 221, 237
Mucopolysaccharide(s): Heart valve, mucoprotein, *Deiss and Leon*, 685
Mucoprotein: Heart valve, mucopolysaccharides, *Deiss and Leon*, 685
Muscle: *See also* Diaphragm, Heart
Mutase: Phospho-. *See* Phosphomutase
Phosphogluco-. *See* Phosphoglucomutase
Phosphoribo-. *See* Phosphoribomutase

N

Necturus: Urine, glomerulus, potassium, *Bott*, 287
Nereocystis luetkeana: Iodine, isotopic, metabolism, *Tong and Chaikoff*, 473
Nuclease: Deoxyribo-. *See* Deoxyribonuclease
Nucleic acid: Deoxyribo-. *See* Deoxyribonucleic acid
Nucleoprotein(s): *Spitnik, Lipshitz, and Chargaff*, 765
Nucleoside diphosphate(s): Synthesis, enzymatic, *Lieberman, Kornberg, and Simms*, 429
Nucleoside triphosphate(s): Synthesis, enzymatic, *Lieberman, Kornberg, and Simms*, 429
Nucleotide(s): Mitochondria, radioactive labeling, phosphorylation, oxidative, relation, *Siekevitz and Potter*, 237
Purine. *See* Purine nucleotide
Pyridine. *See* Pyridine nucleotide
Pyrimidine. *See* Pyrimidine nucleotide
Shock, tourniquet, *Jordan and Gray*, 669
3′-Triphosphopyridine. *See* Triphosphopyridine nucleotide

O

Oil: *See also* Coconut oil
Oligo-1,6-glucosidase: Saccharides, branched, digestion, effect, *Larner and McNickle*, 723
Orotidine-5′-phosphate: Synthesis, enzymatic, *Lieberman, Kornberg, and Simms*, 403

P

Pancreas: Deoxyribonuclease, dinucleotides, isomeric, action, *Sinsheimer*, 579
Pantetheine: Analogues, synthesis and metabolism, *Stewart, Cheldelin, and King*, 319
Pantothenic acid: *Stewart, Cheldelin, and King*, 319
Papaya: Latex, lysozyme crystalline mercury derivative, isolation and properties, *Smith, Kimmel, Brown, and Thompson*, 67
Phenol: Dinitro-. *See* Dinitrophenol
Phosphatase(s): Dialkylfluoro-. *See* Dialkylfluorophosphatase
Phosphate: Transfer, enzymatic, mechanism, *Harrison, Boyer, and Falcone*, 303

XUM

Phosphoglucomutase: *Guarino and Sable*, 515
Phosphogluconate: Oxidation pathway, liver glucose catabolism, relation, *Bloom, Eisenberg, and Stetten*, 461
Phosphoglucose isomerase: *Schistosoma mansoni, Bueding and MacKinnon*, 507
Phospholipide: Inositol. *See* Inositol phospholipide
Phosphomutase(s): *Guarino and Sable*, 515
Phosphoribomutase: *Guarino and Sable*, 515
Phosphoribosylpyrophosphate: 5-, synthesis, enzymatic, and properties, *Kornberg, Lieberman, and Simms*, 389
Phosphorylation: Cytochrome *c* reduction, relation, *Borgström, Sudduth, and Lehninger*, 571
Ferrocytochrome *c* oxidation, relation, *Nielsen and Lehninger*, 555
Liver mitochondria, oxidation, thyrotoxicosis, *Maley and Lardy*, 377
Oxidative, mitochondria, relation, *Siekevitz and Potter*, 221
—, mitochondrial nucleotides, radioactive labeling, relation, *Siekevitz and Potter*, 237
Placenta: Citrate utilization, estradiol effect, *Villee*, 171
Plant: Systems, asparagine synthesis, *Webster and Varner*, 91
—, aspartate metabolism, *Webster and Varner*, 91
Polymerase(s): Deoxyribonucleode-. *See* Deoxyribonucleodepolymerase
Polysaccharide(s): Muco-. *See* Mucopolysaccharide
Porphyrin: Formation, citric acid cycle relation, *Wriston, Lack, and Shemin*, 603
Potassium: Urine, glomerulus, *Necturus, Bott*, 287
Proline: Determination, photometric, *Troll and Lindsley*, 655
Protease: Lymph organ, *Hess, Campbell, and Herranen*, 163
Protein(s): Lipo-. *See* Lipoprotein
Muco-. *See* Mucoprotein
Nucleo-. *See* Nucleoprotein
Proteinase: I, lung, insulin hydrolysis, relation, *Dannenberg and Smith*, 55
—, —, polymers from amino acid esters, relation, *Dannenberg and Smith*, 55
Proteolysis: Enzymes, lung, *Dannenberg and Smith*, 45
Pseudomonas tabaci: Toxin, phytopathogenic, chemical constitution, *Woolley, Schaffner, and Braun*, 485
Purine nucleotide(s): Synthesis, enzymatic, *Kornberg, Lieberman, and Simms*, 417
Pyridine nucleotide(s): Trifluoroacetic acid anhydride and, reaction, *Shuster, Kaplan, and Stolzenbach*, 195
Pyrimidine(s): Determination, isotope derivative method, *Fresco and Warner*, 751
Pyrimidine nucleotide(s): Synthesis, enzymatic, *Lieberman, Kornberg, and Simms*, 403
Pyrrole: Synthesis, succinate-glycine cycle, relation, *Shemin, Russell, and Abramsky*, 613
Pyruvate: Serine formation from, *Nyc and Zabin*, 35

R

Riboflavin: Tryptophan metabolism, relation, *Henderson, Koski, and D'Angeli*, 369
Ribonucleic acid: Deoxy-. *See* Deoxyribonucleic acid
Riboside: 6-Azathymine deoxy-. *See* Azathymine deoxyriboside
Ribulose: Urine, identification, *Futterman and Roe*, 257

S

Saccharide(s): Branched, digestion, oligo-1,6-glucosidase effect, *Larner and McNickle*, 723

Schistosoma mansoni: Hexokinase, *Bueding and MacKinnon*, 495
Phosphoglucose isomerase, *Bueding and MacKinnon*, 507
Serine: Formation, pyruvate relation, *Nyc and Zabin*, 35
Serotonin: *See also* Hydroxytryptamine
Shock: Tourniquet, nucleotides, *Jordan and Gray*, 669
Starch: Digestion, gastrointestinal, *Larner and McNickle*, 723
Steroid(s): 16-Substituted, *Huffman and Lott*, 627, 633
Succinate: -Glycine cycle, pyrrole synthesis, relation, *Shemin, Russell, and Abramsky*, 613
Succinic acid: Ketosis, alloxan diabetes, effect, *Beatty and West*, 661
Sulfur: Metabolism, tissue cultures, *Morgan and Morton*, 539

T

Threonine: Requirement, *Rose, Coon, Lockhart, and Lambert*, 101
Thymine: 6-Aza-. *See* Azathymine
Thymus: Histone, fractionation, chromatographic, *Crampton, Moore, and Stein*, 787
Thyrotoxicosis: Liver mitochondria, oxidation, phosphorylation relation, *Maley and Lardy*, 377
Tissue culture: L-Cystine requirement, *Morgan and Morton*, 539
Sulfur metabolism, *Morgan and Morton*, 539
Toxin: Phytopathogenic, *Pseudomonas tabaci*, chemical constitution, *Woolley, Schaffner, and Braun*, 485
Trauma: *Jordan and Gray*, 669
Trifluoroacetic acid: Anhydride, pyridine nucleotide and, reaction, *Shuster, Kaplan, and Stolzenbach*, 195
Triphosphopyridine nucleotide: 3′-, preparation and properties, *Shuster and Kaplan*, 183
Trypsin: Inhibition, urea effect, *Viswanatha and Liener*, 777
Tryptamine: Hydroxy-. *See* Hydroxytryptamine
Tryptophan: Metabolism, riboflavin relation, *Henderson, Koski, and D'Angeli*, 369
—, vitamin B_6 relation, *Henderson, Koski, and D'Angeli*, 369

U

Urea: Trypsin inhibition, effect, *Viswanatha and Liener*, 777
Uric acid: Urine, methionine-$C^{14}H_3$ metabolism, relation, *Sime and Johnson*, 41
Uridine-5′-phosphate: Synthesis, enzymatic, *Lieberman, Kornberg, and Simms*, 403
Urine: Glomerulus, potassium, *Necturus, Bott*, 287
Ribulose, identification, *Futterman and Roe*, 257
Uric acid, methionine-$C^{14}H_3$ metabolism, relation, *Sime and Johnson*, 41
L-Xylulose, identification, *Futterman and Roe*, 257

V

Vitamin: B_2. *See also* Riboflavin
B_6, tryptophan metabolism, relation, *Henderson, Koski, and D'Angeli*, 369

X

Xylulose: L-, excretion, D-glucuronolactone effect, *Touster, Hutcheson, and Rice*, 677
—, urine, identification, *Futterman and Roe*, 257

XUM
